

KeyCom

Better way to plan and manage your telecom network

Do you find it cumbersome to manage your telecom network? Do you miss modern features for network planning? Do you need to update network information in more than one place?

KeyCom is a modern map-based solution to manage your telecom network. With this browser based tool you can plan, document and maintain your entire network including the customer connections, network devices and cables. And the solution runs in your web browser. Therefore, with this very same solution you can flexibly and safely work with your partners and contractors.

Keypro offers this tool as a comprehensive and carefree cloud solution. All you need is a modern web browser, we will take care for the rest.

Telecom planning and management solution in your web browser

WEB

Lean and quick user interface
All you need is a web browser.

100%

Browse, edit, update, connect, analyze,
share. Full functionality included.

Flexible and secure cloud solution.
If you want, we can also host your data.

Works wherever you have Internet connection.
Also, with smartphone or tablet PC.

Data capture, training, support, data migration.
Our professionals at your service.

Cost-effective monthly or yearly contract with
unlimited amount of users.

- Access and manage all data associated with your telecom network: cables, devices, connections and customers easily and quickly in a single system.
- Create reports and analyze your network.
- Control editing and viewing access precisely based on user groups and free form geographic areas. Share the needed data easily and securely with your contractors.
- Interface directly with with CRM, ERP and network provisioning systems.
- Online interfaces with other systems (WMS, WFS). Data import in DWG and MapInfo formats. AutoCAD import and export.
- Input land survey data. Attach external documents such as photographs to network elements from the field.
- Fully interoperable with other Keypro solutions and with any modern GIS system.
- Can be interfaced with machine control systems.
- We offer a Turnkey solution – all your existing network information will be transferred from your current systems, even from paper maps.
